MEMORANDUM FOR: Assistant Director for Special Activities

SUBJECT: Possible Intel Requirements for [   ]   25X1A
                                   To Be on Forthcoming Agenda

25X1

       Assuming that [   ] could become fully operational by April of 1963, it seems to me that now is the time to review the sequence of events from the time Headquarters receives requirements until the bird has completed its mission.   Several questions which might be asked are as follows:

      1.   How does Headquarters promulgate the mission to the field?

      2.   What are the arrangements for pilot briefing on planned flight route, both from our ops and intel considerations?

      3.   What functions specifically will be carried out by ops and intel at Headquarters and what responsibilities will the Intel Staff in the field have?

      4.   How many intelligence personnel; what qualifications and what rank will be required in [   ]   25X1

      5.   What has [   ] for intel support such as space, map cabinets, walls suitable for map displays, and all other equipment necessary for this field intel unit?

      Such questions, I believe, should be decided and answered in the near future to permit assignment, training, clearances, etc.
